☑️ Recorded	<input type="checkbox"/>

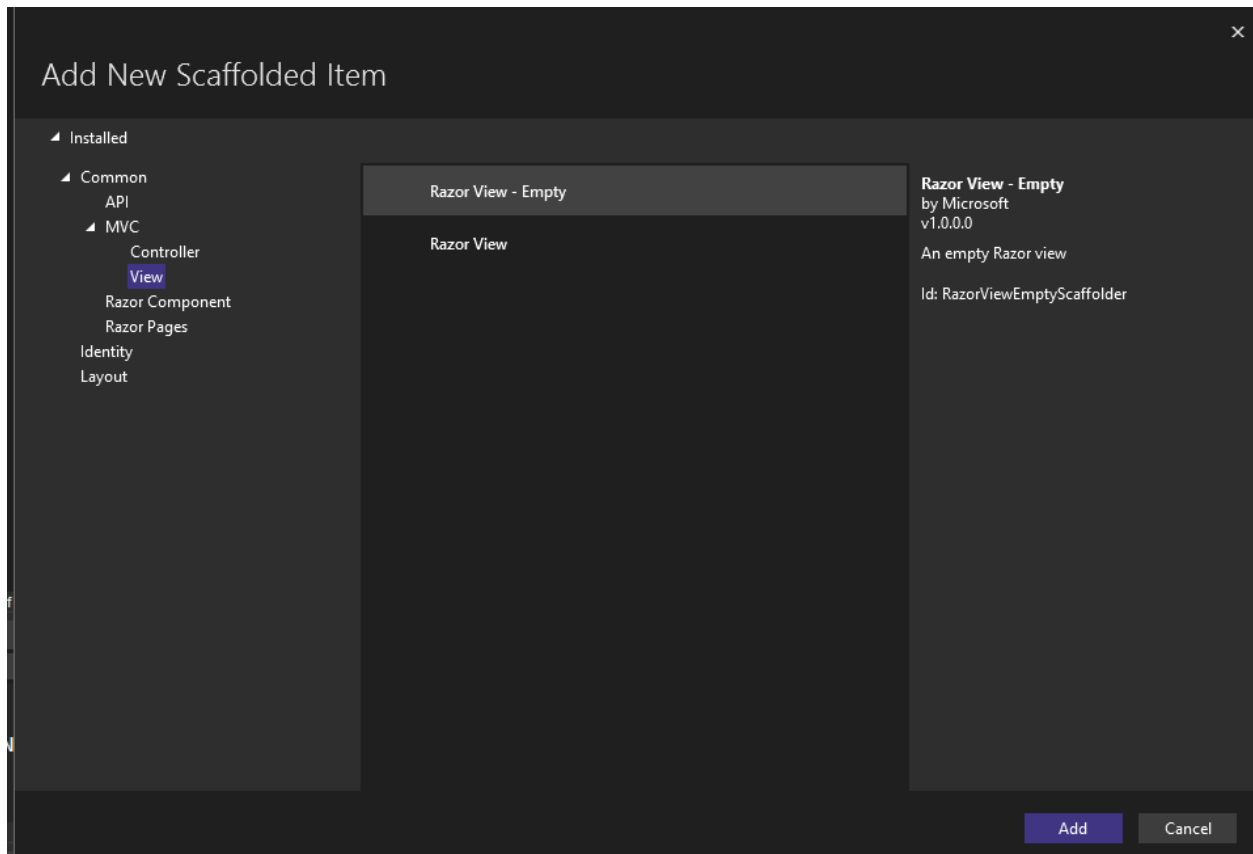

Create a new view called “Hello”, and return it using the hello Action.

Solution:

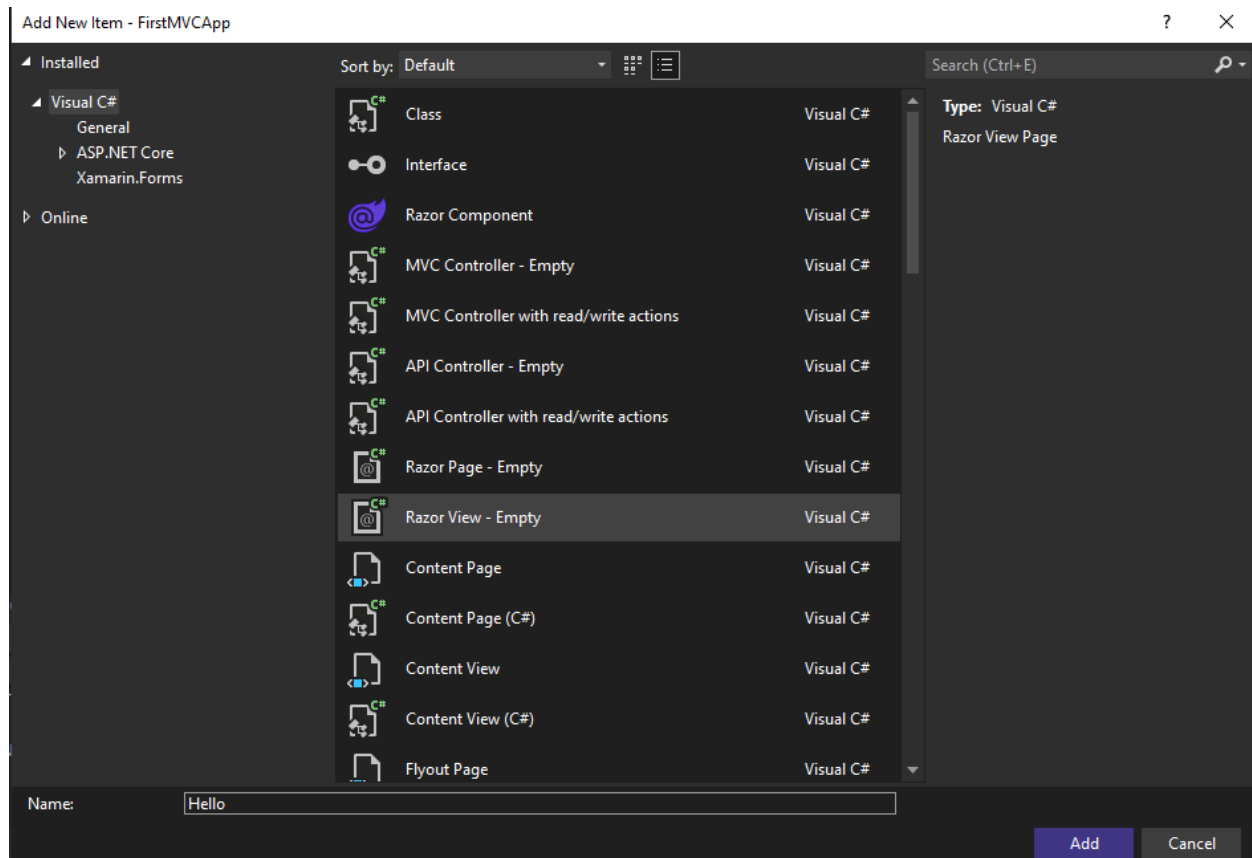

1. Add a new View inside Views → HelloWorld

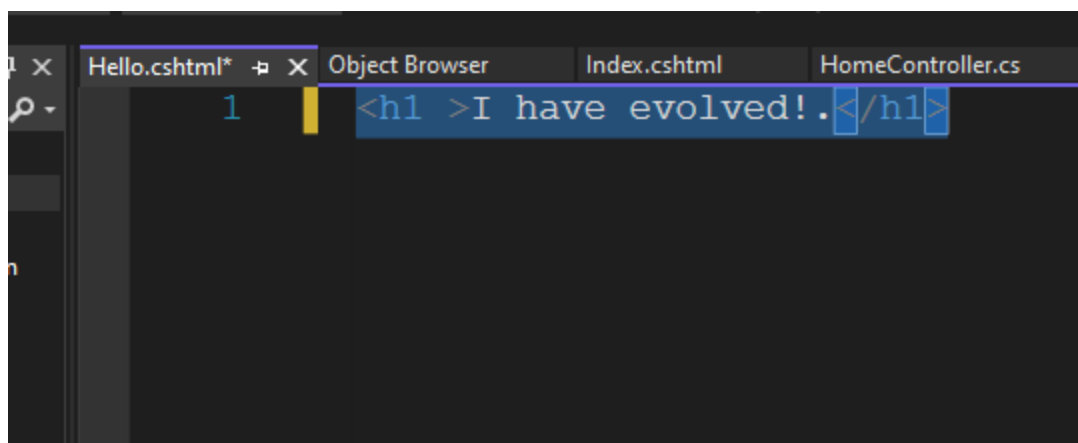

2. Select Empty View.

3. Name it Hello.cshtml

4. Delete the code in the View, and add a title in HTML that says something like “I have Evolved!”.

```
<h1 >I have evolved!.</h1>
```

5. Change our Hello Action inside our HelloWorldController to return the new view we created instead of a string!.

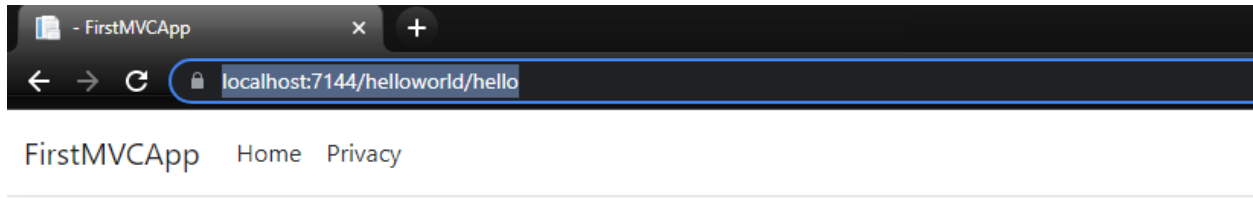

```
public class HelloWorldController : Controller
{
    public IActionResult Index()
    {
        return View();
    }

    public IActionResult Hello()
    {
        return View();
    }
}
```

Now run the app and call the Hello Action.

the URL format should be:

```
https://localhost:[your port number]/helloworld/hello
```

**I have evolved!.**
